Product Data Sheet

Biotin anti-human CD83

Catalog # / Size: 2126520 / 100 μg

2126515 / 25 µg

Clone: HB15e

Isotype: Mouse IgG1, κ

Reactivity: Human

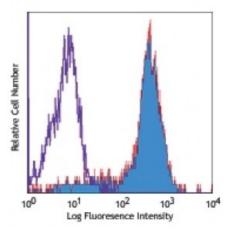

Preparation: The antibody was purified by affinity

chromatography, and conjugated with biotin under optimal conditions. The solution is free of unconjugated biotin.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide.

Concentration: 0.5

Monocytes-derived dendritic cells (induced with GM-CSF+IL-4+TNF- α) stained with biotinylated HB15e, followed by Sav-PE

Applications:

Applications: Flow Cytometry

Recommended

Usage:

Notes:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of

this reagent is \leq 0.5 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each

application.

Application

Additional reported applications (for the relevant formats) include:

immunohistochemical staining of acetone-fixed frozen tissue sections4.

Description: CD83 is a 43 kD single chain type I glycoprotein also known as HB15. A member

of the immunoglobulin superfamily, CD83 is expressed on a subset of dendritic cells, Langerhans cells, and weakly on activated lymphocytes. Although CD83 is thought to play a role in antigen presentation and/or lymphocyte activation, the precise function of this protein is unknown. CD83 is considered to be a useful

marker for mature dendritic cells.
