Product Data Sheet

PE anti-human CD177

Catalog # / Size: 2179030 / 100 tests

2179025 / 25 tests

Clone: MEM-166

Isotype: Mouse IgG1, κ

Immunogen: Human granulocytes

Reactivity: Human

Preparation: The antibody was purified by affinity

chromatography and conjugated with PE under optimal conditions. The solution is free of unconjugated PE and

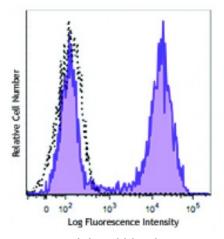

unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide and

0.2% (w/v) BSA (origin USA).

Concentration: Lot-specific

Human peripheral blood granulocytes were stained with CD177 (clone MEM-166) PE (filled histogram) or mouse IgG1, κ PE isotype control (open histogram).

Applications:

Applications: Flow Cytometry

Recommended

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is 5 microL per million cells or 5 microL per 100 microL of whole blood. It is recommended that the reagent be titrated for optimal performance for

each application.

Application Notes:

Additional reported applications (for the relevant formats) include: immunoprecipitation, Western blotting5, and immunofluorescence4.

Description: CD177 is also known as neutrophil specific antigen 1, NB1, and polycythemia

rubra vera 1. It is a member of the uPAR family and is a GPI-linked cell surface glycoprotein with a molecular weight of 60 kD. CD177 is expressed on

granulocytes and bone marrow progenitors (early erythroblasts,

megakaryocytes). It is thought to be involved in allogeneic and autoimmune

responses to neutrophils.
