Product Data Sheet

Alexa Fluor® 647 anti-human CD314 (NKG2D)

| Catalog # / Size: | 2204125 / 25 tests 2204130 / 100 tests |
|-----------------------|---|
| Clone: | 1D11 |
| Isotype: | Mouse IgG1, к |
| Reactivity: | Human |
| Preparation: | The antibody was purified by affinity chromatography and conjugated with Alexa Fluor® 647 under optimal conditions. |
| Formulation: | Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and 0.2% (w/v) BSA (origin USA). |
| Concentration: | 0.5 |

Human peripheral blood lymphocytes were stained with CD8 FITC and CD314 (Clone 1D11) Alexa Fluor® 647 (top) or mouse IgG1, κ Alexa Fluor® 647 isotype control (bottom).

Applications:

| Applications: | Flow Cytometry |
|-----------------------|--|
| Recommended Usage: | Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is 5 microL per million cells or 5 microL per 100 microL of whole blood. It is recommended that the reagent be titrated for optimal performance for each application. |
| | * Alexa Fluor® 647 has a maximum emission of 668 nm when it is excited at 633 nm / 635 nm. |
| Application Notes: | The 1D11 antibody blocks MICA binding to T cells, induces redirected lysis, and costimulates T cells activation and proliferation. Additional reported (for the relevant formats) applications include: immunoprecipitation ^{1,2} , blocking of ligand binding, induction of redirected cell lysis, and costimulation of T cells proliferation ²⁻⁷ . The LEAF TM purified antibody (Endotoxin <0.1 EU/µg, Azide-Free, 0.2 µm filtered) is recommended for functional assays (Cat. No. 320810). For highly sensitive assays, we recommend Ultra-LEAF TM purified antibody (Cat. No. 320814) with a lower endotoxin limit than standard |

| Description: | CD314 is a homodimeric C-type lectin-like protein also known as NKG2D. It is |
|--------------|--|
| - | expressed on NK cells, CD8 ⁺ T cells, γ/δ T cells, and <i>in vitro</i> induced LAK cells. Several molecules have been identified as the ligands for NKG2D, including MHC class-I chain-related protein A (MICA), MICB, and UL16-binding proteins (ULBPs). NKG2D has no intrinsic signaling capacity, but attains this by non-covalent association with DAP10 or DAP12 adaptors. In addition to being a primary activation receptor on NK cells, NKG2D is also a costimulatory receptor for TCR-mediated T cell proliferation and cytokine production. The interaction of NKG2D with its ligands plays a role in the immune surveillance against pathogen and tumor cells, and in the pathogenesis of autoimmune diseases. |
