## PE/Cy7 anti-human/mouse Cutaneous Lymphocyte Antigen (CLA)

**Catalog # / Size:** 2206575 / 25 tests

2206580 / 100 tests

Clone: HECA-452
Isotype: Rat IgM, κ
Reactivity: Human,Mouse

**Preparation:** The antibody was purified by affinity

chromatography and conjugated with PE/Cy7 under optimal conditions. The solution is free of unconjugated PE/Cy7

and unconjugated antibody.

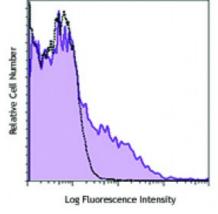

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide and

0.2% (w/v) BSA (origin USA).

Workshop Number: V S075

Concentration: 0.5

Human peripheral blood lymphocytes were stained with CLA (clone HECA-452) PE/Cy7 (filled histogram).

## **Applications:**

**Applications:** Flow Cytometry

Recommended E

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is 5 microL per million cells or 5 microL per 100 microL of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.

**Application** 

Notes:

The HECA-452 antibody cross-reacts with mouse skin homing lymphocytes4. Treatment of activated HUVEC cells with HECA-452 antibody inhibits lymphocyte adhesion. Additional reported applications (for the relevant formats) include: blocking of lymphocyte binding to E-selectin3, and immunohistochemistry  $^{1,2}$  of acetone-fixed frozen sections and formalin-fixed paraffin-embedded sections.

**Description:** Cutaneous lymphocyte antigen (CLA) is a 140 kD homodimer protein recognized

by a unique mAb, HECA-452. It is expressed on T cells in skin, subsets of peripheral blood memory T cells, NK cells, memory B cells and dendritic cells as well as on monocytes, granulocytes, and activated endothelial cells. CLA is a carbohydrate epitope of sialic acid and fucose-modified P-selectin glycoprotein ligand-1 (PSGL-1), a surface glycoprotein expressed on the majority of peripheral blood leukocytes. CLA is a ligand for E-selectin, P-selectin, and L-selectin. It plays

a role in memory lymphocyte homing, tethering, and rolling.
