

PE/Cyanine5 anti-human CD335 (NKp46)

Catalog # / Size: 2259755 / 25 tests
2259760 / 100 tests

Clone: 9E2

Isotype: Mouse IgG1, κ

Immunogen: NKp46-Fc fusion protein

Reactivity: Human

Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and 0.2% (w/v) BSA (origin USA)

Concentration: Lot-specific

Human peripheral blood lymphocytes were stained with anti-human CD56 FITC and anti-human CD335 (NKp46) (clone 9E2) PE/Cyanine5 (left) or mouse IgG1, κ PE/Cyanine5 isotype control (right).

Applications:

Applications: Flow Cytometry

Recommended Usage: Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is 5 μL per million cells in 100 μL staining volume or 5 μL per 100 μL of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.

Application Notes: Clone 9E2 has been shown to block NK activation through NKp46.⁶

Description: CD335, also known as NKp46, is a member of the natural cytotoxicity receptor (NCR) family which triggers cytotoxicity in NK cells. CD335 is directly involved in target cell recognition and lysis, and is exclusively expressed on CD3⁻CD56⁺ NK cells, suggesting it is a universal marker for NK cells. NKp46, along with NKp30 and NKp44, is referred to as a natural cytotoxicity receptor (NCR) and plays a very important role in killing virus-infected tumor cells and MHC-class I-unprotected cells.
