## **Product Data Sheet**

## APC/Cy7 anti-human FcεRIα

Catalog # / Size:	2273160 / 100 tests 2273155 / 25 tests
Clone:	AER-37 (CRA-1)
Isotype:	Mouse lgG2b, к
<b>Reactivity:</b>	Human
Preparation:	The antibody was purified by affinity chromatography and conjugated with APC/Cy7 under optimal conditions. The solution is free of unconjugated APC/Cy7 and unconjugated antibody.
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and $0.2\%$ (w/v) BSA (origin USA).
Concentration:	Lot-specific

Human peripheral blood lymphocytes were stained with CD203c PE and FcεRIα (clone AER-37) APC/Cy7 (top), or mouse IgG2b, κ APC/Cy7 isotype control (bottom).

## **Applications:**

		0	~ 1			
Applications:	Flow Cytometry	contr				
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is 5 microL per million cells or 5 microL per 100 microL of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.	Mouse IgG2b, k isotype contro	a a a a		0203c PE	
Application Notes:	Clone AER-37 (CRA-1) has been reported to bind the receptor even in the presence of IgE.4

Description:	High affinity IgE receptor (Fc $\epsilon$ RI) plays a ker response. Fc $\epsilon$ RI is a tetrameric receptor co subunit (Fc $\epsilon$ RI $\alpha$ ), one $\beta$ -subunit, and two $\gamma$ - high affinity, while the $\beta$ - and $\gamma$ -chains are signals. Fc $\epsilon$ RI $\alpha$ is a 50 kD transmembrane	mpl sub resp prot	ex, unit oons ein	which is co ts. FceRla o sible for mo with Ig sup	omposed of o directly binds ediating intra perfamily str	one α- s IgE with acellular ucture. It

is primarily found on mast cells and basophils. Further studies have indicated that FcεRIα is also expressed on many inflammatory cells including cutaneuos Langerhans cells, dendritic cells, monocytes of patients with allergic disorders, platelets, bronchial epithelial cells, eosinophils produced in hypereosinophilic syndrome, and neutrophils from allergy-induced asthma patients.
