Product Data Sheet

PerCP/Cy5.5 anti-GFP

Catalog # / Size:	2290055 / 25 tests 2290060 / 100 tests
Clone:	FM264G
Isotype:	Rat IgG2a, κ
Immunogen:	TLR9-GFP transfected cell line
Reactivity:	Human
Preparation:	The antibody was purified by affinity chromatography and conjugated with PerCP/Cy5.5 under optimal conditions. The solution is free of unconjugated PerCP/Cy5.5 and unconjugated antibody.
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and 0.2% (w/v) BSA (origin USA).
Concentration:	0.2

GFP-transfected CHO cells were fixed and permeabilized, and then intracellularly stained with anti-GFP (clone FM264G) PerCP/Cy5.5 (filled histogram) or isotype control rat IgG2a, κ PerCP/Cy5.5 (open histogram).

Applications:

Applications		
Applications:	Flow Cytometry	
Recommended Usage:	Each lot of this antibody is quality control tested by intracellular immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is 5 microL per million cells or 5 microL per 100 microL of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.	
	* PerCP/Cy5.5 has a maximum absorption of 482 nm and a maximum emission of 690 nm.

Description:	Green fluorescent protein (GFP) was originally identified as a protein involved in bioluminescence, which is from the jellyfish <i>Aequorea Victoria</i> . It is widely used as a fluorescent indicator for monitoring gene expression in a variety of cellular systems, including living organisms and fixed tissues. Unlike other bioluminescent reporters, GFP fluoresces without the need for exogenous substrates or cofactors, or other intrinsic or extrinsic proteins, making GFP a useful tool for monitoring gene expression and protein localization <i>in vivo</i> . Purified GFP is a 27 kD monomer	
research use only. Not far disgnastic use. Not far reseals. Conv. Distachnology, Inc. will not be held response
