Product Data Sheet

PE anti-human CD3

Catalog # / Size: 2324025 / 25 tests

2324030 / 100 tests

Clone: SK7

Isotype: Mouse IgG1, κ

Reactivity: Human

Preparation: The antibody was purified by affinity

chromatography, and conjugated with PE under optimal conditions. The solution is free of unconjugated PE and

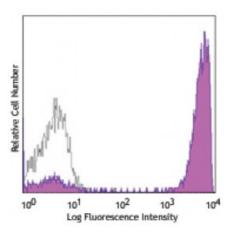

unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide and

0.2% (w/v) BSA (origin USA).

Concentration: Lot-specific

Human peripheral blood lymphocytes were stained with CD3 (clone SK7) PE (filled histogram) or mouse IgG1, κ PE isotype control (open histogram).

Applications:

Applications: Flow Cytometry

Recommended

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. **Test size products are transitioning from 20 microL to 5 microL per test**. Please check your vial or your CoA to find the suggested use of this reagent per million cells in 100 microL staining volume or per 100 microL of whole blood. It is recommended that the reagent be titrated for antipul performance for each application.

optimal performance for each application.

Application

Notes:

Additional reported application (for the relevant formats) include:

immunohistochemical staining of frozen tissue sections^{4,5,8}, immunofluorescent

staining⁶, and Western blotting3.

Description: CD3ε is a 20 kD chain of the CD3/T-cell receptor (TCR) complex, which is

composed of two CD3 ϵ , one CD3 γ , one CD3 δ , one CD3 ζ (CD247), and a T-cell receptor (α/β or γ/δ) heterodimer. It is found on all mature T cells, NK T cells, and some thymocytes. CD3, also known as T3, is a member of the immunoglobulin superfamily that plays a role in antigen recognition, signal transduction, and T

cell activation.
