PE/Cy7 anti-human CD3

Catalog # / Size: 2324080 / 100 tests

2324075 / 25 tests

Clone:

Isotype: Mouse IgG1, κ

Reactivity: Human

Preparation: The antibody was purified by affinity

> chromatography, and conjugated with PE/Cy7under optimal conditions. The solution is free of unconjugated PE/Cy7

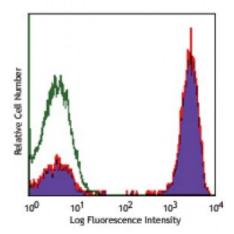

and unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide and

0.2% (w/v) BSA (origin USA).

Concentration: Lot-specific

Human peripheral blood lymphocytes stained with SK7 PE/Cv7

Applications:

Applications: Flow Cytometry

Recommended

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. Test size products are transitioning from 20 microL to 5 microL per test. Please check your vial or your CoA to find the suggested use of this reagent per million cells in 100 microL staining volume or per 100 microL of whole blood. It is recommended that the reagent be titrated for

optimal performance for each application.

Application

Additional reported application (for the relevant formats) include:

Notes:

immunohistochemical staining of frozen tissue sections^{4,5,8}, immunofluorescent

staining⁶, and Western blotting3.

CD3ɛ is a 20 kD chain of the CD3/T-cell receptor (TCR) complex, which is **Description:**

> composed of two CD3ε, one CD3γ, one CD3δ, one CD3ζ (CD247), and a T-cell receptor $(\alpha/\beta \text{ or } \gamma/\delta)$ heterodimer. It is found on all mature T cells, NK T cells, and some thymocytes. CD3, also known as T3, is a member of the immunoglobulin superfamily that plays a role in antigen recognition, signal transduction, and T

cell activation.
