Product Data Sheet

PE anti-human CD63

Catalog # / Size:	2365015 / 25 tests 2365020 / 100 tests	
Clone:	H5C6	Relative Cell Number
Isotype:	Mouse lgG1, к	
Immunogen:	T cell line HPB-ALL	
Reactivity:	Human	
Preparation:	The antibody was purified by affinity chromatography and conjugated with PE under optimal conditions. The solution is free of unconjugated PE and unconjugated antibody.	Belat
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and 0.2% (w/v) BSA (origin USA).	Thr per
Concentration:	Lot-specific	sta (fill

Thrombin-activated human peripheral blood platelets were stained with CD63 (clone H5C6) PE (filled histogram) or mouse IgG1, κ PE isotype control (open histogram).

Applications:

Applications:	Flow Cytometry
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. Test size products are transitioning from 20 microL to 5 microL per test . Please check your vial or your CoA to find the suggested use of this reagent per million cells in 100 microL staining volume or per 100 microL of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.
Application Notes:	Additional reported applications (for the relevant formats) include: Western blotting1, immunofluorescence2, and immunoprecipitation1.

Description:	CD63 is a 53 kD type III lysosomal glycoprotein also known as LIMP, LAMP-3, gp55, and melanoma-associated antigen (ME491). CD63 is a member of the tetraspan transmembrane superfamily (TM4SF) protein expressed on activated platelets, monocytes/macrophages, endothelium, fibroblasts, osteoclasts, and smooth muscle cells. CD63 may be involved in platelet activation and is thought to function as a transmembrane adaptor protein. CD63 has been shown to associate with CD9, CD81, VLA-3, and VLA-6.
