Product Data Sheet

Purified anti-human CD54

Catalog # / Size:	2365510 / 100 μg 2365505 / 25 μg
Clone:	HA58
Isotype:	Mouse IgG1, к
Immunogen:	Colonic cancer BM314 cells
Reactivity:	Human
Preparation:	The antibody was purified by affinity chromatography.
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.
Concentration:	0.5

Human peripheral blood lymphocytes were stained with CD54 (clone HA58) PE (filled histogram) or mouse IgG1, κ PE isotype control (open histogram).

Applications:

		and the second
Applications:	Flow Cytometry	the second second
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤0.25 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.	
Application Notes:	Clone HA58 recognizes an epitope located in the extracellular D1 domain of CD54.3	MDA-MB435 breast cancer cell line was stained with anti-human CD54, detected with anti-mouse DyLight [™] 649, and nuclear counterstained with DAPI. Images were acquired with a TE300 fluorescence microscope with a 20x objective. Data provided by: Er Liu

Description:	CD54 is a 85-110 kD type I transmembrane protein also known as ICAM-1. It is expressed on activated endothelial cells, high endothelial venules, T and B cells, monocytes/macrophages, granulocytes, and dendritic cells. The expression of ICAM-1 can be released from the cell surface. CD54 plays a role in cellular adhesion and is involved in inflammation and leukocyte extravasation. CD54 has also been shown to be the major cellular receptor for rhinovirus. ICAM-1 binds to CD11a/CD18 (LFA-1), CD11b/CD18 (Mac-1), CD11c/CD18 (p150, 95) as well as
