## **Product Data Sheet**

## PerCP anti-human CD197 (CCR7)

Catalog # / Size: 2366205 / 25 tests

2366210 / 100 tests

Clone: G043H7

**Isotype:** Mouse IgG2a, κ

Immunogen: CCR7-transfected cells

Reactivity: Human

**Preparation:** The antibody was purified by affinity

chromatography and conjugated with PerCP under optimal conditions. The solution is free of unconjugated PerCP

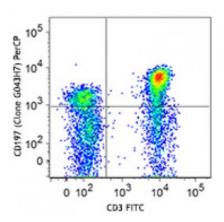

and unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide and

0.2% (w/v) BSA (origin USA).

Concentration: Lot-specific

Human peripheral blood lymphocytes were stained with CD3 FITC and CD197 (clone G043H7) PerCP (top) or mouse IgG2a,  $\kappa$  PerCP isotype control (bottom).

## **Applications:**

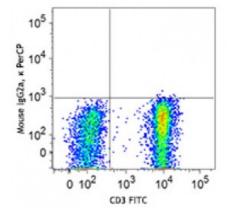

**Applications:** Flow Cytometry

Recommended Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is 5 microL per million cells or 5 microL per 100 microL of whole blood. It is recommended that the reagent be titrated for optimal performance for

each application.

\* PerCP has a maximum absorption of 482 nm and a maximum emission of 675 nm.

**Description:** 

CCR7, also known as CD197, is a chemokine receptor that binds CCL19 and CCL21. CCR7 and its ligands link innate and adaptive immunity by affecting interactions between T cells and dendritic cells and their downstream effect. Naïve T cells enter the lymph node through high endothelial venules, which express CCL21. Dendritic cells and macrophages enter the lymph node through afferent lymphatics. The encounter of T cells and dendritic cells in the T cell zone is CCR7-dependent. In addition, during immunological surveillance, B cells recirculate between B-cell-rich compartments (follicles or B cell zones) in secondary lymphoid organs, surveying for antigen. After antigen binding, B cells move to the boundary of B and T zones to interact with T-helper cells; this B cell migration is directed by CCR7 and its ligands. CCR7-positive cancer cell expression has been associated with lymph node metastasis.
