Product Data Sheet

Purified anti-human CD107b (LAMP-2)

Catalog # / Size: 2371505 / 25 µg

2371510 / 100 µg

Clone:

Isotype: Mouse IgG1, κ

Adult human adherent spleen cells Immunogen:

Reactivity: Human

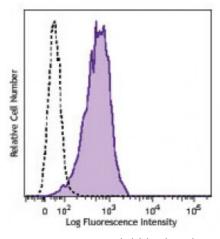

The antibody was purified by affinity **Preparation:**

chromatography.

Phosphate-buffered solution, pH 7.2, Formulation:

containing 0.09% sodium azide.

Concentration: 0.5

Human acute myeloid leukemia cell line KG1a was fixed, permeabilized, and stained with CD107b (clone H4B4) PE (filled histogram) or mouse IgG1, κ PE isotype control (open histogram).

Applications:

Applications: Immunofluorescence

Recommended Each lot of this antibody is quality control tested by intracellular **Usage:**

immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤0.5 microg per million cells

in 100 microL volume. For

immunohistochemical staining on formalin-fixed paraffin-embedded tissue sections, the suggested use of this reagent is 5.0 - 10 microg per ml. It is recommended that the reagent be titrated for optimal performance for

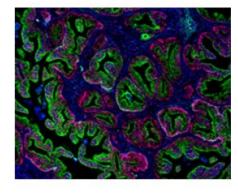

each application.

Additional reported applications (for the **Application Notes:** relevant formats) include:

immunohistochemical staining of frozen

glomeruli2 and immunofluorescent

staining of neutrophils^{2,3}.

Human paraffin-embedded prostate tissue slice was stained with purified anti-human CD107b (clone H4B4) followed by goat anti-mouse IgG (clone Poly4053) DyLight™ 488 (green) and anti-human CD44 (clone IM7) Alexa Fluor® 594 (red). The nuclei were

Description: CD107b, also known as LAMP-2, is a 105 kD, highly gylcosylated, type

I transmembrane protein. CD107b is expressed in lysosomal/endosomal

membranes in nearly all cells, and on the surface of activated platelets, activated lymphocytes and some tumor cell lines. LAMP-2 is known to have roles in cell adhesion and cellular homeostasis, including autophagocytosis and antigen

presentation.
