## APC anti-human CD25

Catalog # / Size: 2380545 / 25 tests

2380550 / 100 tests

Clone: M-A251

Isotype: Mouse IgG1, κ

Human PHA-induced lymphocyte cells Immunogen:

Reactivity: Human

**Preparation:** The antibody was purified by affinity

> chromatography and conjugated with APC under optimal conditions. The solution is free of unconjugated APC and

unconjugated antibody.

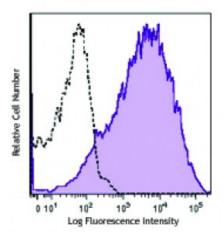

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide and

0.2% (w/v) BSA (origin USA).

Workshop **Number:**  **IV A053** 

**Concentration:** Lot-specific

PHA-stimulated (3 days) human peripheral blood lymphocytes were stained with CD25 (clone M-A251) APC (filled histogram) or mouse IgG1, κ APC isotype control (open histogram).

## **Applications:**

**Applications:** Flow Cytometry

Recommended

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is 5 microL per million cells or 5 microL per 100 microL of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.

Application

Notes:

Additional reported applications (for the relevant formats) include:

immunohistochemical staining of paraformaldehyde fixed frozen sections.1

The CD25 molecule reveals three epitope regions: A. B. and C. M-A251 antibody recognizes epitope region B. Unlike other CD25 antibody clones, M-A251 can detect CD25 after fixation with paraformaldehyde.

**Description:** 

CD25 is a 55 kD type I transmembrane glycoprotein also known as low affinity IL-2 receptor  $\alpha$  chain or Tac. It is expressed on progenitor lymphocytes, activated T and B cells, and activated monocytes/macrophages. CD25 is also expressed on a subset of non-stimulated CD4<sup>+</sup> T cells termed T regulatory cells. Soluble CD25/IL-2Rα is produced as a consequence of lymphocyte stimulation and is found in biological fluids following inflammatory responses. CD25 associates with IL-2 receptor β (CD122) and common y (CD132) chains to form a high affinity IL-2R complex.
