## **Product Data Sheet**

## **APC anti-human CD14**

Catalog # / Size: 2435590 / 100 tests

2435585 / 25 tests

Clone: 63D3

**Isotype:** Mouse IgG1, κ

Immunogen: Purified human peripheral blood

monocytes.

Reactivity: Human

**Preparation:** The antibody was purified by affinity

chromatography and conjugated with APC under optimal conditions. The solution is free of unconjugated APC and

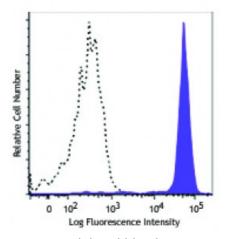

unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide and

0.2% (w/v) BSA (origin USA).

Concentration: Lot-specific

Human peripheral blood monocytes were stained with APC anti-human

CD14 (clone 63D3) (filled

histogram) or APC mouse IgG1, κ isotype control (open histogram).

## **Applications:**

**Applications:** Flow Cytometry

Recommended

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is 5 microL per million cells or 5 microL per 100 microL of whole blood. It is recommended that the reagent be titrated for optimal performance for

each application.

**Description:** 

CD14 is a 53-55 kD glycosylphosphatidylinositol (GPI)-linked membrane glycoprotein that is also known as the LPS receptor. CD14 is expressed at high levels on monocytes and macrophages, and at lower levels on granulocytes. Some dendritic cell populations such as interfollicular dendritic cells, reticular dendritic cells, and Langerhans cells have also been reported to express CD14. As a high-affinity receptor for LPS, CD14 is involved in the clearance of gramnegative pathogens and in the upregulation of adhesion molecules and cytokine expression in monocytes and neutrophils.
