## Spark NIR<sup>™</sup> 685 anti-human CD45

Catalog # / Size:	2442760 / 100 tests 2442755 / 25 tests
Clone:	2D1
lsotype:	Mouse IgG1, к
Immunogen:	Human PBMC
<b>Reactivity:</b>	Human
Preparation:	The antibody was purified by affinity chromatography and conjugated with Spark NIR™ 685 under optimal conditions.
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and 0.2% (w/v) BSA (origin USA)
Workshop Number:	750 under optimal conditions.
Concentration:	Lot-specific

Human peripheral blood lymphocytes were stained with CD45 (clone 2D1) Spark NIR<sup>™</sup> 685 (filled histogram.) Open histogram represents unstained cells.

## **Applications:**

Applications:	Flow Cytometry	
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is 5 μL per million cells in 100 μL staining volume or 5 μL per 100 μL of whole blood. Spark NIR <sup>™</sup> 685 has a maximum excitation of 665 nm and a maximum emission of 685 nm.	
Application Notes:	It was found that the HI30 clone and the 2D1 clone can cross block each other's binding.

It is a tyrosine phosphatase expressed on the plasma membrane of all hematopoietic cells, except erythrocytes or platelets. CD45 is a signaling molecule that regulates a variety of cellular processes including cell growth, differentiation, cell cycle, and oncogenic transformation. CD45 plays a critical role in T and B cell antigen receptor-mediated activation by dephosphorylating substrates including p56Lck, p59Fyn, and other Src family kinases. CD45 non-covalently associates with lymphocyte phosphatase-associated phosphoprotein (LPAP) on T and B lymphocytes. CD45 has been reported to bind galectin-1 and to be associated with several other cell surface antigens including CD1, CD2, CD3, and CD4.
