

FITC anti-human CD11c

Catalog # / Size:	2457580 / 100 tests 2457575 / 25 tests
Clone:	S-HCL-3
Isotype:	Mouse IgG2b, κ
Immunogen:	Spleen cells from patient diagnosed with hairy cell leukemia.
Reactivity:	Human
Preparation:	The antibody was purified by affinity chromatography and conjugated with FITC under optimal conditions. The solution is free of unconjugated FITC and unconjugated antibody.
Formulation:	Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide and 0.2% (w/v) BSA (origin USA).
Concentration:	Lot-specific

Human peripheral blood granulocytes were stained with CD11c (clone S-HCL-3) FITC (filled histogram) or mouse IgG2b, κ FITC isotype control (open histogram).

Applications:

Applications:	Flow Cytometry
Recommended Usage:	Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is 5 microL per million cells or 5 microL per 100 microL of whole blood. It is recommended that the reagent be titrated for optimal performance for each application.
Application Notes:	Additional reported applications (for the relevant formats) include: immunohistochemistry on frozen tissue sections ^{1,2,3,4} and immunoprecipitation ¹ .

Description:	CD11c is a 145-150 kD type I transmembrane glycoprotein also known as integrin α_x and CR4. CD11c non-covalently associates with integrin β_2 (CD18) and is expressed on monocytes/macrophages, dendritic cells, granulocytes, NK cells, and subsets of T and B cells. CD11c has been reported to play a role in adhesion and CTL killing through its interactions with fibrinogen, CD54, and iC3b.
