Product Data Sheet

PerCP Armenian Hamster IgG Isotype Ctrl

Catalog # / Size: 2604645 / 25 μg

2604650 / 100 µg

Clone: HTK888

Isotype: Hamster IgG

Immunogen: Trinitrophenol + KLH

Preparation: The immunoglobulin was purified by

affinity chromatography, and

conjugated with PerCP under optimal conditions. The solution is free of unconjugated PerCP and unconjugated

immunoglobulin.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide.

Concentration: 0.2

Applications:

Applications: Flow Cytometry

Recommended

Usage:

Each lot of this antibody is quality control tested by immunofluorescent staining

with flow cytometric analysis as negative control. Use at concentrations

comparable to those of the specific antibody of interest.

* PerCP has a maximum absorption of 482 nm and a maximum emission of 675

nm.

Application Notes:

The HTK888 immunoglobulin is useful as an isotype-matched control (for the relevant formats) for Western blotting, immunoprecipitation, functional assay, immunofluorescence microscopy, immunocytochemistry and immunofluorescent staining (surface or intracellular) for flow cytometric analysis. The LEAF™ purified antibody (Endotoxin <0.1 EU/µg, Azide-Free, 0.2 µm filtered) is recommended for functional assays (Cat. No. 400916) as negative control. For *in vivo* studies or highly sensitive assays, we recommend Ultra-LEAF™ purified antibody (Cat. No. 400940) with a lower endotoxin limit than standard LEAF™ purified antibodies

(Endotoxin < 0.01 EU/microg).

Description: This antibody was chosen as an isotype control after screening on a variety of

resting, activated, live, and fixed mouse, rat and human tissues.
