

FITC anti-mouse Ig light chain κ

Catalog # / Size: 2647545 / 50 µg
2647550 / 500 µg

Clone: RMK-45

Isotype: Rat IgG

Reactivity: Mouse

Preparation: The antibody was purified by affinity chromatography and conjugated with FITC under optimal conditions. The solution is free of unconjugated FITC and unconjugated antibody.

Formulation: Phosphate-buffered solution, pH 7.2, containing 0.09% sodium azide.

Concentration: 0.5

C57BL/6 splenocytes were stained with anti-mouse Ig light chain κ (clone RMK-45) FITC (filled histogram) or rat IgG1, κ FITC isotype control (open histogram).

Applications:

Applications: Flow Cytometry

Recommended Usage: Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is ≤0.25 microg per million cells in 100 microL volume. It is recommended that the reagent be titrated for optimal performance for each application.

Application Notes: The RMK-12 monoclonal antibody may be used as a primary antibody for ELISA or as secondary for detection of mouse Ig κ.

Human peripheral blood lymphocytes were stained with (filled histogram) or without (open histogram) purified mouse IgG1, κ anti-human CD3 (clone UCHT1), followed by anti-mouse Ig light chain κ (clone RMK-45) FITC.

Description: The RMK-45 monoclonal antibody reacts with immunoglobulin light chain κ in all tested mouse haplotype (Igh-a and b). It does not react with the λ chain.
