Product Data Sheet

APC/Cyanine7 anti-human IgG Fc

Catalog # / 2653655 / 25 tests

Size: 2653660 / 100 tests

Clone: M1310G05

Isotype: Rat IgG2a, ĸ

Human Siglec-E-IgG Fc fusion Immunogen:

protein.

Reactivity: Human

The antibody was purified by affinity Preparation:

chromatography and conjugated with

APC/Cyanine7 under optimal

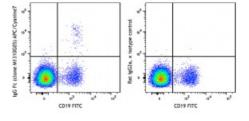

conditions.

Formulation: Phosphate-buffered solution, pH 7.2,

containing 0.09% sodium azide and

0.2% (w/v) BSA (origin USA)

Concentration: Lot-specific

Human peripheral blood lymphocytes were stained with CD19 FITC and anti-human IgG Fc (clone M1310G05) APC/Cyanine7

(left) or rat IgG2a, κ

APC/Cyanine7 isotype control

(right).

Applications:

Applications: Flow Cytometry

Recommended

Each lot of this antibody is quality control tested by immunofluorescent staining with flow cytometric analysis. For flow cytometric staining, the suggested use of this reagent is 5 μL per million cells in 100 μL staining volume or 5 μ L per 100 μ L of whole blood. It is recommended that the

reagent be titrated for optimal performance for each application.

Application

Usage:

Clone M1310G05 recognizes IgG in the membrane of memory B cells, has a Notes:

stronger affinity for IgG1 and IgG3 than for IgG2 and IgG4, and does not

cross react with IgD, IgE, or IgM.

IgG Fc is a homodimer that is composed of the constant region of the two **Description:**

> heavy chains that form the IgG molecule. The Fc fragment mediates opsonization, antibody dependent cellular cytotoxicity (ADCC), and

complement activation through binding to Fc receptors such as CD16, CD32,

CD64, and the complement factor C1.
