## **Product Data Sheet**

## Pacific Blue<sup>™</sup> anti-human IL-17A

| Catalog # / Size:  | 3161555 / 25 tests<br>3161560 / 100 tests   |
|--------------------|---|
| Clone:             | BL168   |
| Isotype:           | Mouse IgG1, κ   |
| Immunogen:         | Recombinant full length human IL-17A  |
| <b>Reactivity:</b> | Human   |
| Preparation:       | The antibody was purified by affinity<br>chromatography, and conjugated with<br>Pacific Blue™ under optimal conditions.<br>The solution is free of unconjugated<br>Pacific Blue™. |
| Formulation:       | Phosphate-buffered solution, pH 7.2,<br>containing 0.09% sodium azide and<br>0.2% (w/v) BSA (origin USA).   |
| Concentration:     | Lot-specific  |

PMA (50 ng/ml) +ionomycin (1 microg/ml)-stimulated (6 hours + monensin, 2 µM) human peripheral blood lymphocytes intracellularly stained with BL168 Pacific Blue<sup>™</sup> and CD3 (UCHT1) PerCP/Cy5.5

## **Applications:**

Applications: Flow Cytometry

Recommended<br/>Usage:Each lot of this antibody is quality control tested by intracellular<br/>immunofluorescent staining with flow cytometric analysis. For flow cytometric<br/>staining, the suggested use of this reagent is  $\leq 1.0$  microg per  $10^6$  cells in 100<br/>microL volume or 100 microL of whole blood. It is recommended that the reagent<br/>be titrated for optimal performance for each application.

\* Pacific Blue<sup>™</sup> has a maximum emission of 455 nm when it is excited at 405 nm. Prior to using Pacific Blue<sup>™</sup> conjugate for flow cytometric analysis, please verify your flow cytometer's capability of exciting and detecting the fluorochrome.

**Description:** IL-17A is the founding member of the IL-17 family, a group of six structurally related pro-inflammatory cytokines. IL-17A, secreted by activated CD4<sup>+</sup> Th17 cell subpopulation, elicits multiple biological activities on a variety of cells including: the induction of IL-6, IL-8, G-CSF, and PGE2 production in epithelial, endothelial or fibroblasts; the enhancement of surface expression of ICAM-1 in fibroblasts; activation of NF-κB and costimulation of T cell proliferation. Recent studies demonstrated that, in mice, activated IL-17-secreting CD4<sup>+</sup> helper T cells (Th17 cells) mediate an autoimmune arthritis that clinically and immunologically resembles rheumatoid arthritis (RA). Human IL-17A shows 63%, 63%, and 72% amino acid sequence identity to rat IL-17A, mouse IL-17A, and a protein encoded by the ORF13 gene of herpesvirus Saimiri (HVS), respectively.
